JAGAN M

Full-Stack Developer & Cybersecurity Enthusiast

Email: mjagan20070314@gmail.com | GitHub: github.com/Jxgxn-007 | LinkedIn: linkedin.com/in/jagan-m-a3a786410

EDUCATION

B.Tech in Information Technology — Expected **2028**
Mepco Schlenk Engineering College — Tamil Nadu, India

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java
Web Development: HTML5, CSS3, React, JavaScript
Areas of Interest: Full-Stack Development, Cybersecurity & Network Forensics
Developer Tools: Git, GitHub, VS Code, Wireshark, Pcap4J

FEATURED TECHNICAL PROJECTS

Enhanced SPIN-IDS - Wireshark-Integrated Real-Time Network Intrusion Detection System

GitHub Repo

Technologies: Java, Pcap4J, Wireshark, Flow-Based Traffic Analysis, 2D-CNN, Packet Image Representation

- Engineered a Java-based network intrusion detection system utilizing Pcap4J for live network packet capture and flow extraction.
- Implemented flow-based network traffic inspection by mapping packet payloads into 2D RGB matrix representations for deep feature extraction.
- Applied CNN-based classification pipelines to identify malicious traffic windows and output explainable network security alerts.

SecureMailScope - Passive Email Network Traffic Analysis & Forensic Inspection Platform

GitHub Repo

Technologies: Python, PCAP / PCAPNG Analysis, TCP Reassembly, SMTP / IMAP / POP3, TLS/SSL Verification

- Developed a passive network traffic forensic tool that reassembles TCP sessions from PCAP captures to inspect mail protocol states.
- Parsed STARTTLS handshakes, TLS record layers, and X.509 certificate chains to detect expired, self-signed, or weak cryptographic suites.
- Integrated layered evaluation combining deterministic rules and anomaly indicators to evaluate communication security posture.

Axis Cyber Labs - Cybersecurity & DevOps Educational Platform

Live Platform | GitHub

Technologies: React, Vite, JavaScript, Modern CSS, Responsive Web Design

- Built a responsive web application frontend for cybersecurity and DevOps learning modules using React and Vite tooling.
- Structured modular, high-performance UI components with fast navigation; platform functionality currently in active development.

Intellicrowd - AI-Based Crowd Management System

Academic Project

Technologies: YOLO, Java, HTML5, CSS3, JavaScript

- Designed a computer-vision crowd management architecture to detect pedestrian volume and monitor spatial crowd density.
- Formulated density tracking principles to assist in identifying high-density conditions and supporting crowd safety operations.

EXPERIENCE

Cybersecurity Internship

Practical Training

- Participated in structured cybersecurity domain training, focusing on practical network analysis concepts and defensive workflows.
